PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 5+ years building scalable SPAs and backend services on **TypeScript, Vue.js (Vue 3 + Nuxt 3), PostgreSQL, and Supabase**, paired with **Tailwind CSS** for the UI layer. Shipped a published-to-npm Vue 3 component, multi-tenant SaaS platforms, and AI-agent systems with **LLM tool-calling and multi-provider routing (OpenAI, Google Gemini, Anthropic)**. Comfortable estimating compatibility / similarity over text and image data, owning **data modeling, RESTful and GraphQL APIs, state-machine and flow diagrams, and code reviews**, and mentoring junior developers. Strong grounding in **data structures, algorithms, complexity analysis, and web-application security**.

CORE TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2024), PHP 8, SQL
Frontend	Vue.js 3, Nuxt 3, Pinia, Vite, PrimeVue, shadcn-vue / reka-ui, Tailwind CSS, TanStack Query, React 19, React Native / Expo, Next.js (App Router)
Backend	Node.js, NestJS 11, Laravel 12 (Octane), REST APIs, GraphQL, WebSockets (Reverb / socket.io), gRPC-Web
Databases	PostgreSQL (Supabase + self-hosted), Supabase Auth / RLS / Edge Functions / Realtime / Storage, MySQL, Redis, MongoDB
AI / ML	Vercel AI SDK, LangChain JS + LangGraph, Prism (Laravel AI SDK), multi-provider routing (OpenAI, Anthropic, Google Gemini), tool-calling / function-calling, streaming SSE, vector embeddings + pgvector , Google Cloud Vision (image OCR / analysis), prompt engineering
UI / UX	Figma, Atomic Design, Storybook, design systems, web accessibility (a11y), responsive design, human-factors / usability heuristics
Architecture	Software design documentation, flowcharts, state-machine diagrams, ERD / data models, sequence diagrams , OpenAPI
DevOps	Git / GitHub, Docker, CI/CD, blue-green deploys, Vercel, Railway, Cloudflare, Caddy, k6 load testing, Sentry, PostHog, monorepos (Turborepo / pnpm)
Security	OWASP Top 10, RLS, OAuth2 / OIDC, JWT, KYC/AML (Sumsub), Cloudflare WAF, secret rotation, input validation, rate limiting
CS fundamentals	Data structures, algorithms, Big-O / complexity analysis, system-performance trade-offs (storage, bandwidth, compute cost)

SELECTED PROJECTS

Aqd Ejar — Vue 3 SaaS for Saudi Real-Estate · Tier-1 reference

Vue 3 · Vite · Pinia · **PrimeVue 4** · **Tailwind CSS** · Vee-Validate + Yup · Pusher-js · Sentry · PostHog · Laravel 10 (Octane) · **PostgreSQL** · Redis

- Designed and shipped a multi-route Vue 3 SPA (Office Dashboard, Owner Portal, public PropertyQR) connected to a Laravel REST backend; structured **Pinia** stores for offices, contracts, parties, and realtime inbox.
- Extracted and published **vue-hijri-gregorian-datepicker** to npm — bilingual (AR/EN), touch-optimized, used in production by the app.
- Integrated the Saudi government **Ejar** API and **Nafath** national-ID verification end-to-end across forms, validation, and signature flows.
- Authored **flowcharts and state-machine diagrams** in Figma for the contract lifecycle (draft → submitted → registered → renewed / terminated).

Mesej — WhatsApp Business + AI Agents SaaS · Nuxt 3 + AI tool-calling

Nuxt 3 · Vue 3 · TypeScript · Pinia · shadcn-nuxt / reka-ui · **Tailwind v4** · @nuxtjs/i18n · Echo + Pusher · wavesurfer.js · Chart.js · Laravel 12 · **PostgreSQL** · Prism + Gemini / OpenAI

- Built the Nuxt 3 + TypeScript web client (shared inbox, AI agent UI, visual flow builder, broadcast composer) on a Tailwind v4 design system with full RTL / Arabic support.
- Designed the **AI agent v2** runtime: server-side ChatAgent with 12 typed tools (contact / room / tag / assignment management) over **streaming SSE**, with model-agnostic routing across Gemini, OpenAI, and Anthropic.
- Implemented **image and voice pipelines** (Google Cloud Vision OCR on inbound images; FFmpeg + Wavesurfer.js for voice notes) — directly analogous to ingesting profile images + text for downstream scoring.
- Visual flow engine with explicit **state-machine semantics** per node (start, condition, action, wait, branch) backed by FlowExecution records.

BrixFund — UAE Fractional Real-Estate Fintech · Supabase + PostgreSQL

Next.js 16 · TypeScript · **Supabase (Postgres, Auth, RLS, Edge Functions, Storage, Realtime)** · Tailwind · Stripe · Sumsb KYC/AML · Cloudflare WAF · k6

- Modeled the entire investment domain in **PostgreSQL on Supabase** — users, KYC records, properties, offerings, subscriptions, transactions — with **Row-Level Security** policies covering every read / write path.
- Built typed Supabase clients, generated TypeScript types from the schema, and orchestrated server actions with strict input validation (Zod).
- Wrote OpenAPI specs and **load-tested critical endpoints with k6** to size storage, bandwidth, and compute cost before launch.
- Security-hardened: Sumsb KYC/AML, Sentry telemetry, Cloudflare WAF rules, secret rotation, audit logs.

TRAXON — AI Trading Agents · TypeScript monorepo, scoring at scale

TypeScript · Turborepo · Next.js · NestJS · Expo · **PostgreSQL + Drizzle (26 tables)** · **LangGraph + LangChain** · multi-exchange adapters

- Built a typed TypeScript monorepo with shared schema between web, mobile, and backend.
- Designed agentic workflows where the LLM evaluates structured signals (text + numeric features) and emits scored recommendations — the same architectural shape as a **compatibility scorer over profile data**.
- Owned database modeling, query optimization, and complexity analysis for high-frequency scoring loops.

Manifest ERP — Multi-Tenant Manufacturing ERP · Live production

NestJS 11 · TypeORM · PostgreSQL (database-per-tenant) · React 19 · Docker · blue-green deploy on VPS

- Architected true DB-per-tenant isolation with dynamic tenant resolution at the request layer — 55+ feature modules in production.
- Designed and documented ERDs, sequence diagrams, and module-level state machines for orders, production runs, and inventory movements.
- Drove code reviews and mentored two junior engineers on the team through structured PR feedback and pairing.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer

2025 – Present

Domais

Remote

- Architected a multi-module SaaS on **Laravel + Nuxt 3 + Tailwind CSS**, accelerating delivery by ~40%.
- Refactored a legacy monolith, lifting Lighthouse performance from 60 to 90+.
- Built realtime sync over **WebSockets** with **Pinia** state choreography for high-concurrency inboxes.
- Owned Docker + CI/CD for zero-downtime deploys.

Senior Frontend Developer

2024 – 2025

Lexmodo

Remote

- Standardized the frontend on **Vue.js** with a shared component library; eliminated state-management bottlenecks against high-frequency REST APIs.
- Drove cross-functional alignment with backend on contracts and API ergonomics.

Lead Frontend Engineer (Sole Developer)

2022 – 2024

Riadiat SA

Remote

- Led end-to-end client-side architecture for a multi-module enterprise web app from scratch on **Vue.js + Pinia**.
- Built a reusable **Atomic Design** component library with Storybook; cut new-module UI time by ~30%.
- Optimized rendering and store shape; dashboard initial-load down ~25%.

Web Developer

2021 – 2022

Scandiweb

Remote

- Shipped responsive e-commerce frontends on Magento 2 with strict cross-browser + a11y standards in Agile, Git-based, Dockerized workflows.

HOW I MAP TO THIS ROLE

- **TypeScript + Vue.js + PostgreSQL + Supabase + Tailwind CSS** — primary daily stack across Aqd Ejar, Mesej, and BrixFund.
- **SPAs connected to backend services** — Vue 3 SPA in Aqd Ejar (Laravel REST), Nuxt 3 SPA in Mesej (Laravel REST + Reverb WS), Next.js + Supabase Edge Functions in BrixFund.
- **AI / ML model use and image + text scoring** — production tool-calling agents (Prism, Vercel AI SDK, LangGraph), image OCR via Google Cloud Vision, vector search with pgvector. Transfers directly to **profile-image + text compatibility estimation** for matchmaking.
- **System-performance trade-offs (storage / bandwidth / compute)** — k6 load testing on BrixFund, Octane + Horizon throughput tuning on Mesej and Aqd Ejar, query optimization on Manifest ERP.
- **Design documentation** — ERDs, state-machine diagrams, sequence diagrams, and Figma flows authored for every Tier-1 project.
- **UI / UX, Figma, human factors** — design systems with Storybook, a11y baseline, RTL-aware layouts, responsive Tailwind primitives.
- **Security** — OWASP Top 10, Supabase RLS, KYC / AML, WAF, secret rotation in shipped fintech and gov-integrated systems.
- **Mentorship + code review** — daily PR reviews and pairing on Manifest ERP and Domais teams.

EDUCATION & CONTINUOUS LEARNING

- Self-directed deep work across modern Vue, Nuxt, Supabase, and applied LLM systems (LangGraph, AI SDK, Prism).
- Active OSS maintainer: **vue-hijri-gregorian-datepicker** on npm.
